

Towards large scale simulations with $N_f = 2$, fully twisted mass fermions

Presenter: Karl Jansen (NIC)

ETMC collaboration

Abstract: We present the setup for a high statistics simulation of $N_f = 2$, fully twisted mass fermions. We will describe the determination of the phase diagram and the progress in algorithm development necessary to start such a project. We then show that twisted mass fermions can be tuned to full twist and discuss the computation of the twist angles.
